# European Action Plan for the Prevention of Runway Excursions (EAPPRE)

Portugal Runway Excursion Workshop “*Building the Local Action Plan*”

Lisbon 4 December 2013

Richard “Sid” Lawrence

European Safety Programme for ATM (ESP+),  
EUROCONTROL NMD Safety

Network Manager  
nominated by  
the European Commission

# EAPPRE Recommendations

**Network Manager**  
nominated by  
the European Commission

# Key Points

**Network Manager**  
nominated by  
the European Commission

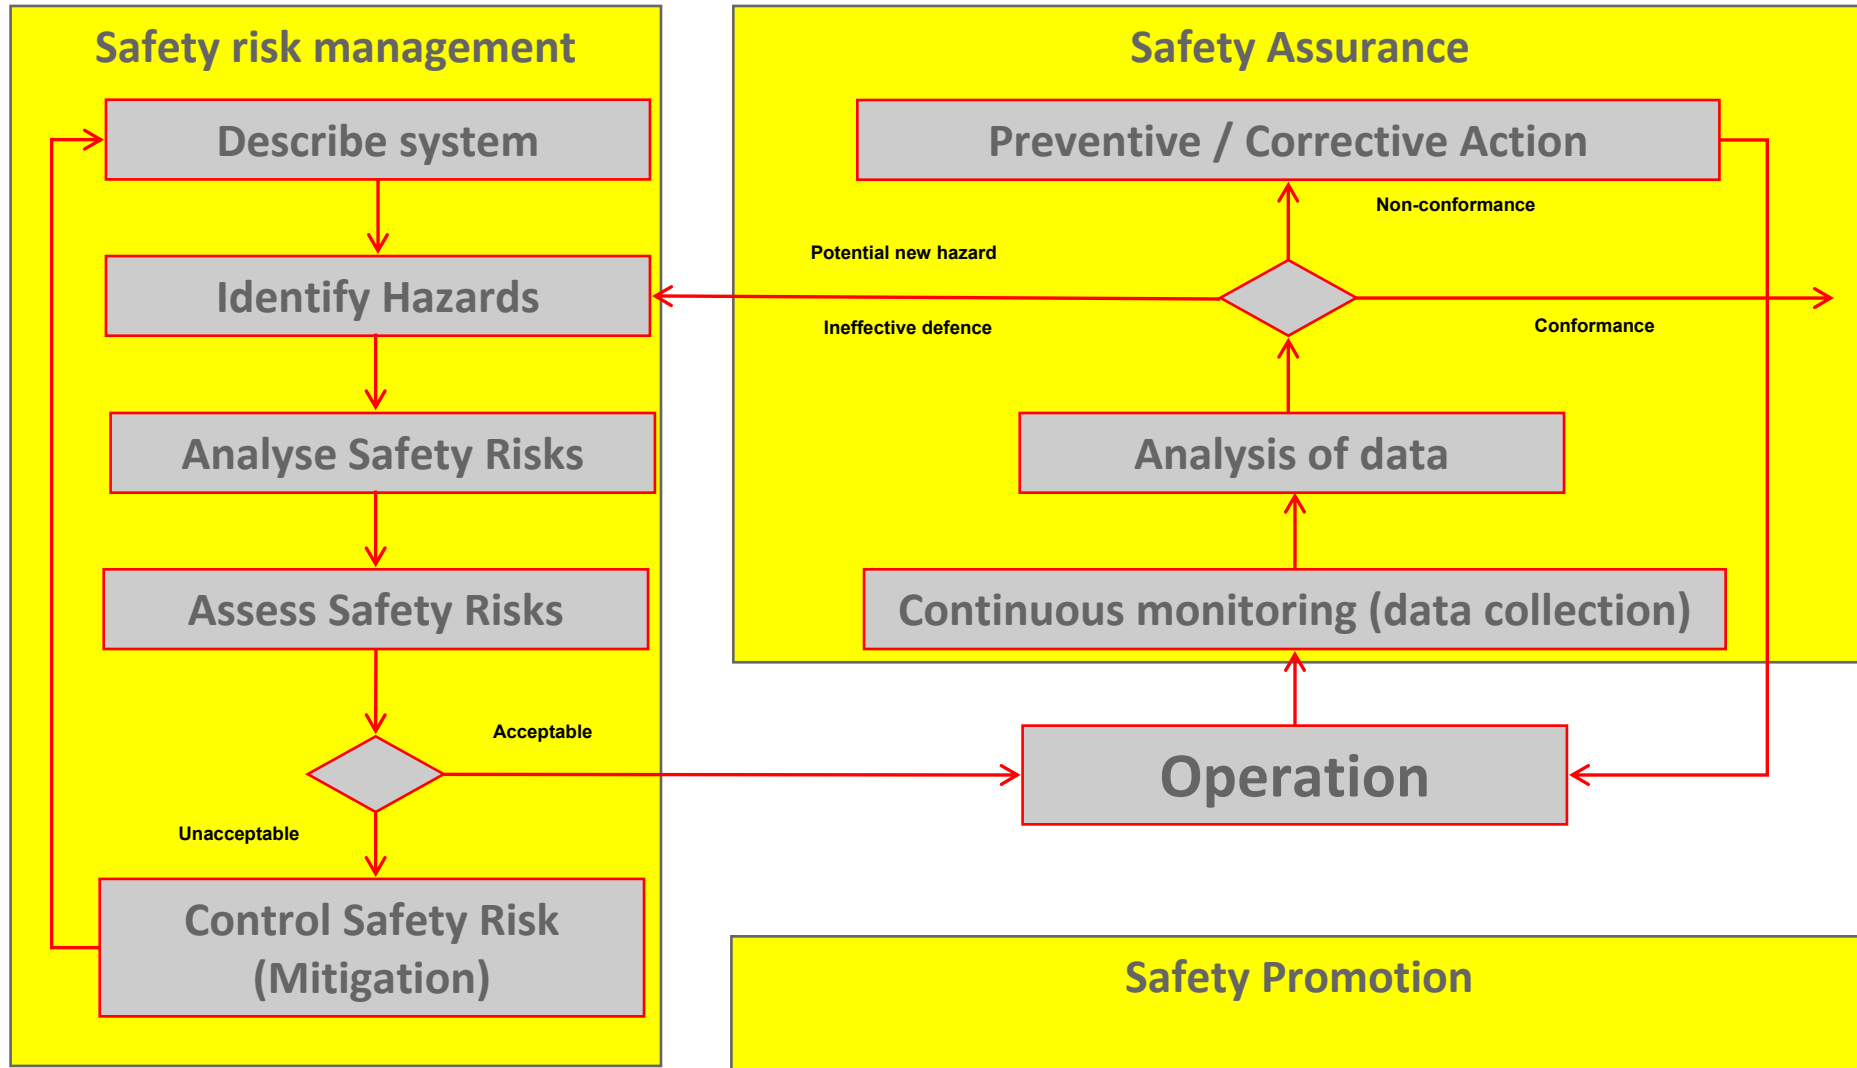

# Safety Officer workload

# Integration of EAPPRE into SMS

## Advantage of Excel sheet

- Easy to use
- Structured
- Saves time
- Documented
- Allows review of EAPPRE implementation (for different stakeholders, for orgs like ERA)

But also for NAA?

# Implementation Tools - CANSO Runway Safety Maturity Checklist - Aerodrome

## RUNWAY SAFETY MATURITY CHECKLIST

Enhancing runway safety is a top priority for the International Civil Aviation Organization (ICAO) and the aviation industry as a whole. With this in mind, the Civil Air Navigation Services Organisation (CANSO) has developed an array of materials designed to aid runway safety improvement. One of these materials is the Runway Safety Maturity Checklist. The checklist is designed for use across the industry, including:

- Air Navigation Service Providers (ANSPs)
- Airlines
- Airport Operators
- Regulators
- Aeronautical Telecommunication and Radio Navigation (ATEL/ANAV) Providers

The checklist is a tool to benchmark these entities' respective maturity levels with regard to managing runway safety risks. It identifies key risk elements and uses a series of questions calling for evidence on each element. For example:

- Is there a process in place? Is the process documented?
- Are employees trained, checked and assessed?
- Is the process working? How do you know?
- How could you improve on this element?

Designed to assist organisations in identifying and prioritising areas for runway safety improvement from all angles, the checklist uses the Analytical Hierarchy Process, taking into consideration the numerous focus areas required for success, including safety benefit, financial and stakeholder impact, complexity and dependencies. Industry-wide accessibility has also been prioritised, and the checklist is currently being migrated to a web-based application.

Implementation of the techniques contained in the CANSO materials will be disseminated and driven through respective peer organisations and their associated industry bodies:

CANSO

ICAO

IATA

ACI

ANSPs

Regulators

Airlines

Airport Operators

The checklist can be accessed and downloaded via the [CANSO Safety web page](#).

Runway Safety Maturity Checklist							
AERODROME	Element What are you looking for? For example, "Do you have....."	Objective Why are you looking for it?	Does the element exist? Is it written down (e.g. procedure)? Does it exist (e.g. equipment, signs, markings etc)? Details	Training Are people trained in the use of the element? Remedial and/or Refresher training? Details	Is it working? How do you know? (e.g. incident reports, analysis, corrective action, feedback) Details	Improvement What could you do to improve this element?	Index
Aerodrome	Provision of weather information systems (ATIS / AWIS / Windsock / Windshear alerting system/weather radar/runway visibility and range monitoring systems) to provide real-time meteorological information.						
Aerodrome	Provision of available, reliable and accurate precision approach aids a) Redundancy / diversity in system architecture						
Aerodrome	Aerodrome procedures for a) conduct of runway inspections including surface conditions and state b) reporting and repair (e.g. contamination, FOD, damage) c) periodic inspection, reporting and maintenance of lighting, signage, markings and taxi						
Aerodrome	Aerodrome procedures to optimise runway visibility Runway and taxiway lighting systems a) being consistent with ICAO requirements b) include RESA and/or other arrestor systems c) appropriate position, length, width, gradient and surface characteristics, friction coatings, grooving, surface texturing and drainage optimised for prevailing conditions, including alternatively aligned runway d) provision of adequate runway (edge)						
Aerodrome	Availability of ICAO compliant aviation rescue and fire fighting service						
Aerodrome	Emergency planning arrangements which include Airlines, ATC, Aerodrome and emergency services						
Aerodrome	Training, checking and assessment to verify use of ICAO compliant phraseology including readback/hearback procedures (airside vehicle operators)						
Aerodrome	Transponder equipage of vehicles required to operate airside where ground surveillance is available						

Similar to EAPPRI and EAPPRE Recommendations

Responses can also be 'weighted' to provide a maturity index and help with prioritisation
