Automation in transport and mobility as a service

Deployment of Galileo and EGNOS in Finland

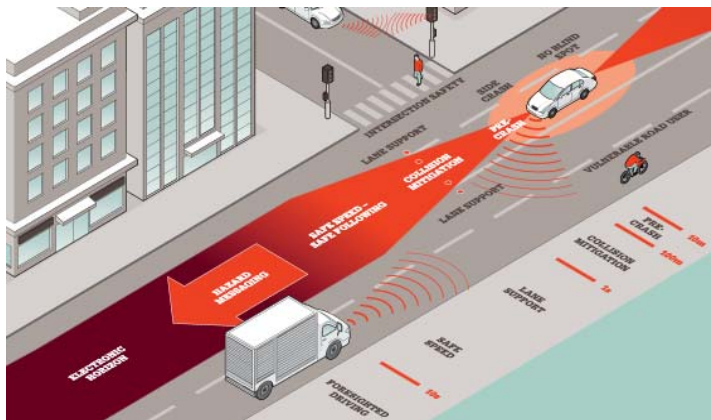

Alberto Fernandez Wytttenbach

Lisboa, 21 September 2017

This presentation can be interpreted only together with the oral comments accompanying it

GNSS is an enabler of several applications in road transportation

- **Navigation** is the most widespread application of Satellite Navigation
- **Satellite road traffic monitoring** services collect floating car location data from vehicles and process traffic information
- **Fleet management** solutions enable transport operators to monitor the logistics activities performance
- **Insurance telematics** services rely on GNSS to increase transparency for insurers/subscribers
- **Cooperative /Connected Vehicles** to enhance road safety and comfort for the driver, by enabling V2V communication
